Enter Your Observations See What's Blooming Flower Guide

The **"NH is Blooming"** is a New Hampshire Beekeepers citizen science project to collect data about various plants, including trees, bushes, fruit, vegetables, wildflowers, annuals, etc. that are blooming in NH and may be of use to pollinators.

Our goal is to get information for the next several years to be able to assess when various blooming events occur.

Currently, there is no definitive guide as to what is blooming and when. Also due to the varied weather climates around New Hampshire, various plants will bloom at different times. The project's results will be very beneficial to clubs and individual beekeepers to help them find plants that withstand NH weather and will bloom especially during dearths

**Goal:** *build a database of when plants, trees, shrubs, etc. are blooming* and whether pollinators are collecting from them. In addition, collect data about the *color of pollen* being brought into the hives.

**Leader:** Deb Slocum

**What information is being collected?**

- Date
- Name of the flower
- If pollinators (of any kind) are on the flower
- Color of pollen being brought into hives

**Who Can Participate?**

Anyone who sees a flower in blossom or sees pollen on a bee.

**How is data collected?**

- On-line at <https://www.nh-is-blooming.com/>
- Via spreadsheet submitted by USPS or email.

**Details & FAQ at:**

<https://www.nh-is-blooming.com/>
